

## Plan a Quick and Safe Escape Route

Use the diagram below to plan an escape route for each member of your family if you hear a smoke alarm. *Be sure to practice this plan with your family at least twice a year.*

A large grid for drawing an escape route plan. The grid is 20 columns wide and 15 rows high, providing a space for users to draw their escape routes.

**Using a pen or pencil show:**

- Each person's bedroom
- At least two ways out of every room
- All windows and doors
- All smoke alarms
- All stairways
- A family meeting place outside
- All doors leading to the outside.

**What's the safest, fastest way out of your house?**

Now draw two ways to reach your outside meeting place from every room in your house

When you finish your escape plan have a practice family fire drill. Make sure everyone knows how to get out safely and where to meet outside
